FEATURES & BENEFITS

Ultimate Fabric Care Solutions

Care for every corner of the wardrobe with an ecosystem of fabric care products, including our Fabric Care Cabinet, Front Loader Washing Machine and Heat Pump Dryer. From precision sensing to autonomous technologies, the fabric care suite removes the guesswork, delivering the perfect balance across each product to ensure optimal care for every garment.

Care For Every Fabric

With four core functions, eight specialised fabric care settings and two extra care settings, this cabinet is designed to take care of your clothing and fabric needs. Its unique features include gentle refreshing, deodorising, sanitising and drying, making it suitable for delicate fabrics like silk, wool, leather, and items that can't be treated in a typical tumble dryer.

Flexible Loading

With a spacious 12-garment capacity across five thoughtfully-designed hangers and configurable rails, you can hang a variety of clothing items, from shirts and blouses to dresses and suits. Four independent folding racks can be adjusted to fit items of different sizes and shapes, such as coats and jackets. The shoe rack provides a convenient and hygienic way to care for your footwear, keeping them fresh and free of odours.

Refresh, Deodorise, Dry, And Sanitise

The Refresh function revitalises clothes with steam and air, so you don't need to rewash lightly worn garments. Deodorise helps to remove unpleasant odours, while the Dry function uses warm air to gently dry clothes. Sanitise eliminates 99.9% of bacteria*, providing peace of mind.

*Independently tested to eliminate greater than 99.99% of Staphylococcus aureus and Escherichia coli.

Specialised Leather Care

A specialised Leather care setting allows you to Refresh, Dry or Deodorise leather garments, such as jackets, coats and skirts. The gentle combination of humidity and temperature control treats your precious leather items without any harsh chemicals or detergents.

A Sustainable Solution

The Fabric Care Cabinet is designed to minimise energy and water usage by reducing the reliance on traditional washing and dry cleaning methods. Use Refresh to revive your garments or Deodorise to remove odours, reducing the need for frequent washing and conserving water.

Designed To Match

Our Fabric Care Cabinet is designed to match our Steam Care washing machine and Heat Pump Dryer, giving you the design freedom to create a cohesive fabric care ecosystem. With multiple configurations from compact to large, this modular solution is designed to work for many spaces within the architecture of the evolving home.

Where applicable:

All appliances use energy, and energy usage typically generates carbon emissions. **Fisher & Paykel Appliances' In-use Energy Carbon Emissions Estimate** indicates carbon emissions from a product's in-use energy. This is calculated either annually or per cycle, using the product's market-specific energy label energy consumption data multiplied by the carbon emissions factor for energy in your country or region.

Our In-use Energy Carbon Emissions Estimate is designed to assist customers in making informed purchasing decisions when comparing different Fisher & Paykel products. For example, a heat pump dryer typically has a lower In-use Energy Carbon Emissions Estimate than a vented dryer.
