INTEGRATED DISHDRAWER™ DISHWASHER

DD60STX6I1, DD60STX6H11

COMPONENTS REQUIRED

TOOLS

Supplied

- ☐ 4x Spacer sets
- ☐ 2x 0.5mm Shims
- ☐ 4x .75mm Shims

Not supplied

- ☐ Box cutter
- ☐ Crosshead screwdriver
- ☐ Flat blade screw driver
- ☐ Drill
- ☐ 1x 13mm Drill bit
- ☐ 1x 2.5mm Drill bit
- ☐ Level
- ☐ Pliers
- ☐ Pencil

PARTS

Supplied and required

- | | |

| <input type="checkbox"/> 4x Side mounting brackets | <input type="checkbox"/> 1x Drain hose support |
| <input type="checkbox"/> 1x Moisture protection tape | <input type="checkbox"/> 1x Drain hose joiner |
| <input type="checkbox"/> 1x Door bracket kits | <input type="checkbox"/> 1x Wire clip |
| <input type="checkbox"/> 16x 16mm Crosshead screws | <input type="checkbox"/> 1x Clamp |
| <input type="checkbox"/> 2x 38mm chassis feet fixing screws and washers | <input type="checkbox"/> 1x External venting kit |

ACCESSING YOUR PRODUCT SPECIFICATIONS

For full product, cabinetry and service specifications, refer to the Planning Guide. To access the Planning Guide, scan the QR code or visit fisherpaykel.com/specify. Search by appliance type, product name or model code.

For installation support please contact the Fisher & Paykel design support team at designsupport@fisherpaykel.com

Product and Panel Dimensions	mm
(A) Chassis height	455
(B) Chassis width	599
(C) Chassis depth	553
(D) Panel minimum height	452
(E) Panel minimum width	596
(F) Panel thickness	16-20
Maximum panel downward extension	50

Note: A 2mm clearance gap is required between the dishwasher drawer panel and surrounding cabinet panels.

ACCESSING YOUR PRODUCT SPECIFICATIONS

Ensure there is a small gap between the custom panel and any cabinetry behind it to maintain a proper seal in the dishwasher.

This prevents moisture escape and condensation, which can damage the custom panel.

Cavity Dimensions	mm
(A) Cavity minimum height	457
(B) Cavity minimum width	600
(C) Cavity minimum depth*	578
(D) Minimum cabinet toe kick height**	100
(E) Minimum cabinet toe kick depth**	60

*Guide assumes 18mm door panels **When venting through toe kick

PRIOR TO INSTALLATION

fisherpaykel.com/specify

1. Refer to the Planning Guide for cabinetry, cavity, panel and service specifications.

2. Ensure the cabinet meets the minimum cavity specifications required.

Check that the cabinet sides are square.

3. If the cavity is too wide, add material to the sides to allow the dishwasher to be secured.

See the planning guide for details.

PRIOR TO INSTALLATION

4. Check that the cabinet is level.

5. The power plug should be accessible after installation for maintenance.

6. Service holes can be routed from the dishwasher into the adjacent cavity.

PRIOR TO INSTALLATION - SERVICES

If routed through the cabinet toe kick, vent ducts require a minimum toe kick height of 100mm and depth of 60mm.

1. The vent hose can be routed through to the adjacent cabinet and into the toe kick.

Alternatively, it can be routed under the dishwasher into the toe kick.

2. The vent duct cut out is 100mm x 220mm.

3. Framed cabinetry:

The cut out should be placed 25mm back from the frame.

PRIOR TO INSTALLATION - SERVICES

Refer to the Planning Guide at fisherpaykel.com for service options.

1. A minimum 57mm diameter service hole is required in the cabinet side.

The center of the hole should be a minimum of 538mm from the front of the chassis.

2. The center of the hole should be a maximum of 38mm from the shelf.

3. If the vent hose is routed through the service hole, cut out the back corner.

UNPACK ALL PRODUCTS

1. Remove the plastic wrap.

2. Remove the top packaging.
Leave the base on to protect
the floor surface while moving
the dishwasher.

3. Do not remove door
bracket from the front of the
dishwasher.

UNPACK ALL PRODUCTS

4. Peel the tape from the top drawer and remove accessories and installation packages from the tub.

Close the drawer and re-apply the tape.

5. Dispose of packaging responsibly.

APPLY SEALING TAPE

1. Ensure underside of countertop is clean and free of dust.

2. Remove backing from tape

3. Apply tape to top edge of cabinet ensuring it is centred and set back 10mm from the front edge.

DISHWASHER SECURING OPTIONS

The dishwasher must be secured to stay in place and prevent vibration. Three fixing points on each side of the chassis is recommended.

1. Securing through chassis sides:

Screws must be fixed through the chassis sides and into the cabinet sides or packers.

2. Securing through chassis bottom:

Screws can be fixed through the bottom of the chassis and into the shelf from the inside of the dishwasher.

2x 38mm fixing screws and washers are supplied.

3. Securing through side brackets:

Middle or upper bracket sets can be inserted into the chassis sides and fixed to the edges of the cabinet.

Both sets can be used if needed.

ATTACH BRACKETS

The brackets must lie flat on the chassis with the locking tabs facing out. The locking tabs must be properly inserted through the slots to secure the brackets.

1. Locate the upper and lower bracket sets.

2. If using the upper bracket set, insert into the slots and tap gently with a soft mallet to secure.

Push the screw tab through the gap in the rubber seal.

3. If using the lower bracket set, insert into lower slots and tap gently with a soft mallet to secure.

Push the screw tab through the gap in the rubber seal.

ATTACH SPACERS

1. Snap off the four spacers with an adhesive strip.

2. Place spacers on each side of the dishwasher between the brackets.

3. If required a larger spacer segment can be snapped on to adjust the thickness.

ATTACH TOP TRIM

Installing the trim bracket is recommended when fitting your dishwasher into a 480mm high cavity to conceal any visible gap between the countertop and the chassis.

1. Align the trim to the chassis ensuring the arrow is pointing forward.

2. Firmly push the trim into the slots to secure it over the rubber seal.

3. Ensure the front of the rubber seal is free of the bracket.

ATTACH VENT HOSE

Refer to the planning guide at fisherpaykel.com for venting options.

The vent can be routed under the dishwasher.

Ensure the cut out size allows the vent elbow to be rotated when the dishwasher is in the cavity.

1. Rotate the elbow to the left or right depending on your venting location.

2. If the vent is routed left or right, push the vent hose onto the elbow firmly to secure.

PUSH INSIDE CAVITY

The minimum gap between the drawer panel and countertop or frame is 2mm.

1. Place hoses and cords through the service holes and into the adjacent cavity.

2. Carefully push the dishwasher into the cavity, feeding the hoses through the service holes as you go. Avoid crushing or twisting the hoses.

3. Place the panel onto the door bracket and adjust the dishwasher within the cavity until the front of the panel aligns with the cabinet doors.

MEASURE CUSTOM PANEL

If panels widths or heights are extended over the minimum dimensions, ensure there is a small gap between the custom panel and any cabinetry behind it.

The drawer must seal fully to prevent moisture escape and condensation, which may damage the custom panel.

1. Measure the distance from the adjacent cupboard doors to the edges of the door bracket.

2. Subtract the required gap between the cabinet panels from each measurement.

The minimum required gap to adjacent cabinet doors or drawers is **2mm**.

3. Use the final measurements to mark vertical lines on the back of the custom panel.

ATTACH PANEL TO DOOR BRACKET

1. Rotate the drawer bracket pins by a quarter turn.
Use pliers to pull the door pin out.

2. Detach the door bracket by pulling down firmly and then angling out.
Disconnect the earth wire from the bracket before removing.

3. Position the door bracket on the custom panel between the marked lines.
Align the bottom of the bracket with the lower edge of the panel.

ATTACH PANEL TO DOOR BRACKET

4. For panels extended at the bottom:

The bracket must be raised above the lower edge of the panel using the extension height (A).

5. Fix one screw in each side through the bracket fixing points.

Pilot holes may be required depending on the panel material.

6. Slot panel onto dishwasher.

Check gaps between the panel and adjacent cabinet doors are a minimum of **2mm**.

ATTACH PANEL TO DOOR BRACKET

7. Remove the door panel and fix the remaining four screws.

INSTALL KNOCK-TO-PAUSE MODULE

1. Secure knock-to-pause module to the panel using the supplied screws.

2. Check that the module is oriented correctly and fixed securely to ensure proper function.

3. Move the panel to the dishwasher.
Plug the knock-to-pause module into the controller.

SECURE PANEL

1. ⚠ Attach the earth wire to the door bracket to ensure safe use.

2. Place the panel back onto the dishwasher. Insert the side pins.
Quarter turn the pins to secure.

3. **For fine vertical adjustments:**
Insert a crosshead screwdriver into the hole above side pins and turn.
The adjustment range is $\pm 2\text{mm}$.

SECURE THROUGH CHASSIS SLOT

Slots in the chassis sides allow screws to be temporarily fixed and the dishwasher to be adjusted within the cavity. Panel alignment can then be checked before final fixing.

1. Pull the drawer halfway out to remove the tub.

On each side of the tub, push locking tabs back.

2. Place the drawer on a protected surface to the left of the appliance.

3. On the chassis sides, lift the insulation.

SECURE THROUGH CHASSIS SLOT

1. Fit a screw in each chassis slot to secure to the cabinet. Partially tighten screws ensuring adjustments can be made.

2. Refit insulation ensuring it is positioned correctly and will not obstruct the drawer runners.

3. To replace the tub, pull the drawer runners halfway out. Place the tub onto the runners.

SECURE THROUGH CHASSIS SLOT

4. Pull locking tabs forward and click the drawer into place.

Ensure hoses are not crushed or twisted when closing the drawer.

5. Check that the panel is aligned with the surrounding cabinetry.

Adjust the dishwasher in the cavity if required.

SECURE THROUGH CHASSIS

1. Pull the drawer halfway out to remove the tub.

On each side of the tub, push locking tabs back.

2. Place the drawer on a protected surface to the left of the appliance.

3. On the chassis sides, lift the insulation.

SECURE THROUGH CHASSIS

4. Insert screws through the two holes on each side of the chassis.

5. Insert the supplied 38mm screws and washers through the front two holes on the bottom of the chassis.

6. Ensure insulation is repositioned correctly and will not obstruct the drawer runners.

SECURE THROUGH CHASSIS

7. Place the tub back onto the runners, pull locking tabs forward and click drawer into place.

SECURE USING BRACKETS

1. If using brackets, partially open the top drawer.

Lift the rubber seal and remove the left and right screw covers from the trim.

2. Fix side brackets using the supplied screws and replace the screw covers.

CHECK PANEL TILT

If the custom panel is slightly angled out compared to the adjacent cabinetry, the supplied shims can be used to make minor adjustments.

Shim options:

2 x 0.5mm, 4 x 0.75mm.

Do not use shims for any adjustments over 1.75mm.

1. Remove the panel and door bracket if adjustment is needed.

2. For panels tilted outward at the bottom of the dishwasher:

Loosen the screws at the top of the bracket on each side.

CHECK PANEL TILT

3. Insert the shim between the panel and the door bracket and tighten the screw.

Slot the panel onto the dishwasher and check.

4. For panels tilted outward at the top of the dishwasher:

Loosen the screws at the bottom of the bracket on each side.

5. Insert the shim between the panel and the door bracket and tighten the screw.

Slot the panel onto the dishwasher and check the drawer panel alignment.

INSTALL VENT

The vent hose should not exceed a maximum length of 1.6 meters. Do not shorten the hose.

If the cabinet is framed or cannot be installed on the shelf edge, cut off the edging on the vent duct.

1. Feed the venting hose into the toe kick space in the adjacent cabinet or under the dishwasher as required.

2. The vent hose can be coiled in the toe kick space. Ensure that there are no sharp bends or kinks.

INSTALL VENT

3. Pull the end of the venting hose through the cut-out and firmly attach it to the vent duct.

4. Secure the vent using the provided screws.

5. For framed cabinetry, install the bracket and screw included in the venting kit.

DRAIN CONNECTION OPTIONS

DD60STX6H11 Water pressure: maximum 1 MPa (145 psi), min. 0.1 MPa (14.5 psi).

DD60STX6I11 Water pressure: maximum 1 MPa (145 psi), min. 0.03 MPa (4.3 psi)

Water connection: 3/4" BSP (GB20) to suit flat washer, recommended temperature: cold 60C

Distances are the same for all installs.

- Floor to support top - min 750mm.
- Floor to drain hose end - min 500mm.
- Floor to water inlet - min 200mm.
- Cabinet side to centre of electrical outlet - 450mm.

Drainage routed to spigot

- Spigot must be higher than standing water with an air gap between to avoid drainage issues.
- Remove excess drain hose to prevent hose drooping below the spigot height.

Drainage routed to standpipe

- Drain hose must be higher than standing water with an air gap between to avoid drainage issues.
- Remove excess drain hose.
- Hoses must not extend into standpipe more than 120mm.

INSTALL DRAIN

Ensure the drain hose support is properly installed and the hose is correctly threaded through to prevent damage and drainage issues.

The dishwasher must not be drained into standing water.

If the drain hose supplied is not long enough to reach your services, a 3.6m drain hose extension kit is available at fisherpaykel.com

1. Install the drain hose support as close to the countertop as possible, with a minimum distance of 750mm from the floor

Thread the hose through the support.

2. For connection to waste tee:

To avoid shavings entering the plumbing system, remove the waste tee before drilling.

Unplug or drill out the waste tee minimum 13mm in diameter before securing joiner.

3. Thread wire clips on to the hoses.

Fit the hose to the supplied hose joiner and secure using the wire clips provided.

Ensure hose is routed straight to the joiner to avoid kinks that restrict drainage.

Trim drain hose if needed.

INSTALL DRAIN

4. For connection to standpipe:

Pull both drain hoses through the support guide and rest in standpipe.

5. Ensure the hoses do not extend more than 120mm into the standpipe to prevent wastewater siphoning back into the tub.

Hoses can be trimmed if necessary.

CONNECT WATER INLET

Do not turn water supply on before power has been connected. The dishwasher must be powered on for flood protection to be enabled.

Isolation taps are required to allow the water supply to be shut off.

1. Check that the supplied rubber washer is inserted into the coupling.

2. Connect the inlet hose to the tap.

Ensure the inlet hose is not kinked and the tap is not pulled or under pressure.

Do not shorten the inlet hose.

3. Hand-tighten into place. Using a spanner or pliers, turn a further 180° to secure. Avoid over-tightening.

CONNECT POWER

Electrical requirements: 220 - 240V minimum 4.8A

The power plug should be accessible after installation for maintenance.

1. Connect power.

2. Check the water connections.

Turn on the water supply and check for leaks.

The dishwasher must be powered on for flood protection to be enabled.

If power is to be disconnected, ensure water supply is turned off.

INSTALLER CHECKLIST

Installation

- ☐ If power is disconnected, ensure water supply is turned off to prevent flooding.
- ☐ Check all parts are installed correctly and are secure.
- ☐ Ensure all clearance gaps have been maintained.
- ☐ Ensure dishwasher is secure and drawer opens and closes freely with no resistance.
- ☐ Ensure panel is fitted correctly to the dishwasher
- ☐ Ensure any packaging or tape securing the racks and spray arm is removed.
- ☐ Check the spray arm is in place, mounted correctly and rotate freely.
- ☐ Ensure knock-to-pause module is fitted securely and operating correctly.

Plumbing

- ☐ Ensure any knock-outs or plugs in drain connection have been drilled out and drain connection has been made.
- ☐ The drain hose joiner must not support the weight of excess hose material. Keep drain hose as fully extended as possible to prevent sagging. Any excess length of drain hose should be kept on the dishwasher side of the high loop.
- ☐ Ensure inlet hose has supplied rubber washer fitted, and that it's tightened.
- ☐ If connecting the drain hose to the sink trap, ensure the high loop is a minimum 150mm higher than the drain hose joiner.
- ☐ Water softener models: adjust the water softener setting from the default setting to suit the water hardness of the area. Refer to your user guide.
- ☐ Ensure water supply is turned off until power is connected and turned on. The Dishwasher must be powered on for the flood protection feature to be enabled.

Electrical

- ☐ Ensure all electrical tests have been conducted in accordance with local regulations.

Test operation

- ☐ Turn on the power and water supplies, then open the drawer. You should hear a beep and see a program indicator light up on the control panel.
- ☐ Add three cups of water into the drawer.
- ☐ Navigate to RINSE and start the program.
- ☐ Check the knock-to-pause function
- ☐ Repeat for the other drawer.
- ☐ After the Rinse cycle has finished, ensure the dishwasher has run and drained correctly.
- ☐ Check the water supply has been shut off correctly.
- ☐ Check drainage connections for leaks.
- ☐ If site is left without power after installation is complete, ensure water supply is turned off to prevent flooding.
